# Tobacco irrigation eyed

By JAMES A. SMITH
Extension Agent

A model has been developed to evaluate the economic consequences of irrigating tobacco. If you are considering adding an irrigation unit, you may want to work through the figures to help determine how profitable it might be.

A series of interviews with North Carolina tobacco producers from the four major N.C. production areas made the following projection: In the Piedmont area in an average year irrigation will increase tobacco yield by 22.9%. In a bad year, yield will be up 58.8%.

If there is a poundage quota as we have with flue tobacco, a 23% increase in yield would reduce land requirement by 18%. If there's a 59% yield increase, there would be a 37% reduction in land requirement when irrigation is used.

Irrigation obviously affects quality. This same survey indicated that in the Piedmont area, with irrigation, in an average year prices would be up 11.2% and in a bad year prices would jump 29.8%.

* * *

Minimum wage was extended to $3.35 per hour January 1, 1981.

* * *

The January Hog and Pig Report indicated hog numbers in Virginia are down 12% and 4% in the U.S.

Virginia farmers indicate that they intend to farrow 13% fewer sows while nationally the farrowing intentions are down 6%

* * *

We constantly remind cattlemen to shorten up the breeding season for a lot of good reasons. This is accomplished simply by managing the bull.

Latest research shows that there's an advantage in worming cows 30 to 40 days after calving. There are a number of good worming materials on the market. Choose the one you like. While you've got the cows up, give them their shots, **while they are open.** Be sure to include: 5 way Lepto, IBR, P13 and BVD. If cows haven't had the 7 way Clostridium, see that they get it. Don't overlook the bull in this roundup.

This is probably a good year to put calves on a 12% protein-grain mix. Creeping calves will most likely pay this year. It's important to save every calf-if he gets up and starts nursing there's little to worry about. I'd like to see every calf get a 7 way Clostridium, a shot of Vitamin A and the navel cord dipped in iodine the first day.

Lice take their toll in January and February. Lysoff is probably one of the easier materials to use-applied as a pour-on. Needs to be done twice, two to three weeks apart.

Calfhood vaccination is a must because of the increase in Brucellosis. The new regulations call for vaccination when calves are 4 to 12 months old. Strive for vaccination at 6 months. I recognize that most cow-calf producers will do this when they get the herd up.

* * *

There's a new calf scour vaccine, Vicogen, on the market. This is a bacterin made from a highly concentrated, inactivated culture of E. Coli. The vaccine is said to stimulate the production of antibodies in the cow against E. Coli. The antibodies are concentrated in the cow's colostrum when the calf feeds the antibodies help prevent a build up of E. Coli in the calf's intestines which prevents severe diarrhea.

The first shot is given the cow 6 weeks before calving and a second shot 3 weeks before calving.

Vaccine is available from veterinarians. Remember-administer to cow, **not** the calf.

* * *

There has been some interest in using liquid supplement to impregnate big round bales or stacks. We have no research from which to recommend this practice.

It would appear that impregnating bales or stacks with 10% of their weight with 32% protein liquid supplement would increase the protein content of the bale about 2%. This practice would be most beneficial for low quality roughage because it would increase value and improve palatability. There would probably be little value in treating better quality hay.

* * *

The Red House Senior Bull Sale is Saturday, January 31, at noon. There's an outstanding group of bulls to be offered. Come and enjoy the new heated Sale Barn that's been constructed for your use.

## Farmers' early plantings up

A recent survey conducted by the Virginia Crop Reporting Service showed farmers' early planting intentions to be up from last year in 7 out of 9 crops estimated.

**Soybean** planted acreage showed the largest increase, 21 percent, as farmers intend to plant 750,000 acres. **Barley** plantings are expected to reach 116,000 acres and **Oats** 55,000 acres, each representing a 10 percent increase over a year ago.

Virginia **corn** growers expect to plant 870,000 acres, an increase of 5 percent over 1980 and the most acreage since 1977. **Peanut** planted acreage, estimated at 112,000 acres, is 8 percent above 1980 plantings and the largest since 1956.

Other crop estimates include: **Sorghum** - 21,000 acres (unchanged from 1980); **All Hay** - 980,000 harvested acres (1 percent increase from 1980); and **Sweet Potatoes** - 2,100 acres (4 percent decrease.)

Good News for Homemakers

# *On combining colors*

By SHIRLEY W. WALTON
Extension Agent

There's a profusion of color splicing in the current dress fashion. A wide variety of effects can be achieved with this geometric pairing of colors and even of fabrics such as borders, panels, stripes. A symetrical and triangular color shapes.

For the homesewer, working with splashes of different colors is an opportunity to exercise the imagination. The technique works well, especially with simple designs. For the less than perfect figure, color can be used to create an illusion. It can disguise problem areas and provide better proportions. For example, to achieve the appearance of bustline fullness, use an advancing warm color. Slim the waist with a darker or a more receding color.

In general, the bright, intense colors such as warm reds, oranges and yellows tend to enlarge and emphasize the shape. Light colors or tints also appear to increase figure proportions. Dark values or shades, as well as the cool blues, greens and violets, tend to diminish figure proportions. Color splicing can be worked by combining different shades of the same color for a seren look. Blending warm related colors creates a harmonious flow. Contrasting colors create dramatic effects when used in proper proportions. Using three colors is bold and exciting, but must be done carefully to achieve balance. Pattern books show numerous designs featuring splice colors and fabrics.

For washable garments, homesewers need to be sure that they select compatible fabrics for their project. If contrasting fabrics are used, be sure that they can be mated without problems. Take care to combine fabrics of compatible weights, such as in a dress. A heavy skirt can pull a lightweight top completely out of shape.

Before purchasing fabrics, find out the characteristics and care requirements. Choose thread, fasteners and trim if used suitable for the fabric and its care requirements.

Homemakers, if you have a homemaking question or problem, you may call 352-8244 or write us at P. O. Box 488, Appomattox, Va. 24522. It is always a pleasure to hear from you and to help you.

Have a good week, homemakers!

**RECIPE OF THE WEEK**
**7-Layer Salad**

1 head lettuce, cut up
2 stalks celery, chopped
2 bunches green onions, chopped
4 hard cooked eggs, chopped
4-6 slices bacon, cooked until crisp, broken into pieces
1 package frozen peas
1 can water chestnuts (optional)

In large bowl, place each ingredient as an individual layer.

Topping: 2 cups salad dressing, 2 tablespoons sugar. Add milk to thin if necessary.

Spread over salad. Sprinkle shredded cheese on top. Cover tightly overnight. Serves 12.

1981 OFFICERS OF THE APPOMATTOX Cattlemen Association were elected last Tuesday evening. Front row: **Dick Thompson, Director; Steve Brown, Vice President; Bill Williamson, Treasurer; Back Row: John Harrison, Secretary; E. W. Jones, Director; and George Shorter, President.**

# Happiness is 4-H

By FRANK SWEET
Extension Agent

Volunteer leaders will be asked to assist with the 4-H Camping program for Appomattox 4-H'ers at Holiday Lake this summer. The camp staff will be decreased substantially to offset rising costs. 4-H volunteers will be helping with the teaching of many 4-H camp classes. Appomattox 4-H'ers will attend camp during the week of June 15-19. If you would like to assist with camp programs, please give us a call at the Extension Office (352-8241).

* * *

Nearly 75 4-H'ers will be recognized at the Annual 4-H Awards Banquet on Thursday, February 5. This important event will be a covered dish supper at the Appomattox High School Auditorium.

* * *

The County 4-H Public Speaking program will be held on Thursday, February 19, beginning at 7:00 p.m. at Appomattox Elementary School. Make your plans to attend this important program, and hear some excellent speeches by young people from our county. Farmers National Bank provides the awards for 4-H Public Speaking.

* * *

A record number of Appomattox 4-H'ers have signed up for the forestry establishment project and will be receiving loblolly pine seedlings from the Virginia Division of Forestry. 4-H'ers will receive enough pine seedlings this year to plant over four acres if the trees were all planted together. As of today (Friday) 82 4-H'ers have signed up to plant trees.

* * *

4-H'ers will have the opportunity to start strawberry patches this spring under a new project that will allow the members to purchase strawberry plants at a reduced rate. Details on this program will be coming to 4-H'ers at their February meetings.

* * *

Several teen 4-H'ers will assist with an Achievement Record Workshop for a group of 4-H'ers in Farmville on February 11. Older members helping with the workshop will be Allen Smith, Glen McClenny, Laurie Cowan and Laura Walton.

The tobacco plant

# Native Virginian

Tobacco has its roots deeply embedded in the history of Virginia. And, according to the latest data at Virginia Tech, the Old Dominion ranks fourth in production among the 18 tobacco-producing states in the United States.

Along with this rise in rank has come an increase in the amount of fuel oil used in curing flue and fire-cured tobacco-the two major types grown in Virginia.

According to Andrew J. Lambert, Extension specialist in agricultural engineering at Virginia Tech, it takes about seven million gallons of fuel oil or LP gas to cure the state's tobacco crop annually. Fuel oil jumped from 49 cents per gallon in 1978 to 98 cents in 1980 and is continuing to rise. The price per gallon of LP gas is generally about two-thirds that of fuel oil.

"The cost of fuel and electricity used to cure a barn of tobacco went from $125 to $245 in three years, a 96 percent increase," Lambert noted. "We can't do anything about the soaring prices, but we can do something about the amount and kind of fuel we use."

And that's why Lambert and several other Tech Extension specialists have planned a Tobacco Energy Conference for Tuesday and Wednesday, Feb. 24-25. The King of the Sea Restaurant in Danville will be the site of the conference designed for tobacco farmers, equipment and service suppliers, educators and industry representatives.

"We have assembled a group of quality speakers who spend a large part of their time studying and testing ways to reduce energy use or use it more efficiently in tobacco production," Lambert stated. "Most have both research and on-farm experience with energy use on tobacco farms in Georgia, South Carolina, North Carolina and Virginia."

Among the topics to be discussed are barn design and curing efficiency, loading the barn, the use of chemical coloring agents, the curing process, air flow, harvesting systems, structural heat loss, alternate energy sources (solar, alcohol, wood, bio-mass heat sources), energy tax credits, and the economics of energy conservation techniques.

The impressive group of speakers consists of authorities on every aspect of tobacco production from Virginia Tech, Clemson University, and North Carolina State University.

All Virginia tobacco producers and interested persons are urged to attend. Pre-registration is necessary. A two-day registration fee of $20 includes two buffet luncheons, refreshment breaks, speaker's fees and a copy of the proceedings. A one-day fee of $14 includes one luncheon, proceedings, speaker's fees and refreshment breaks.

Requests for lodging should be made directly to the Riverside Drive Holiday Inn, Danville, Va. 24541. For additional information on the conference, contact Andrew J. Lambert, Seitz Hall, Virginia Tech, Blacksburg, Va. 24061 or call (703) 961-6089.

Nationwide

# Heaters recalled

A nationwide recall program to repair more than 600,000 liquid propane (LP) gas water heaters now is under way, according to Glen H. Hetzel, Extension safety specialist at Virginia Tech.

The water heaters, which may pose an explosion hazard, contain a thermostat manufactured by the White-Rodgers division of Emerson Electric Co., St. Louis, Mo.

"The water heaters were sold between 1961 and 1980, mainly to rural homeowners," Hetzel stated. Sears, Roebuck and Co. of Chicago, Ill., the A.O. Smith Corp. of Kankakee, Ill., as well as other manufacturers and retailers, sold the heaters.

A.O. Smith manufactured its own water heaters during this period and sold them through plumbing wholesalers and contractors. Sears water heaters were manufactured by State Industries.

"Sears or A.O. Smith LP gas water heaters, containing White-Rodgers thermostats produced between 1964 and 1976, have been involved in 23 explosions involving five deaths and 16 serious injuries to consumers," noted Hetzel.

It appears that during the life of the water heater, the pilot gas control knob of the thermostat becomes damaged so that the safety valve is stuck in the "open" position, allowing LP gas to escape.

Liquid propane is heavier than air; so, in the event of a leak, LP gas can accumulate near the floor and explode from a variety of ignition sources, including an electric spark.

A total of 96 different brand names of water heaters manufactured by the above-listed companies are being covered by the recall program.

Following negotiations with the U.S. Consumer Product Safety Commission, White-Rodgers agreed to mail safety alert notices to all identifiable users of LP gas in the United States, an estimated 15 million households.

Any Virginia homeowner who believes their water heater contains one of the potentially hazardous thermostats is instructed to telephone a toll-free hotline at White-Rodgers headquarters (800-325-9589) to arrange for a replacement with a new, modified thermostat free-of-charge.

The replacement program does not cover any gas water heaters fueled by natural gas. At this time, natural gas water heaters are not believed to pose a safety hazard

DAVID MARSHALL, son of Ben and Peggy Marshall of Appomattox, was guest speaker for the Appomattox Lions Club meeting last Thursday. Marshall, representing Dean Whittier investments brokerage firm out of Richmond, filled the Lions in on investment options, large and small, available to the consumer \ 1979 graduate of William and Mary, Marshall discussed the economy and inflation in relation to individual investments.

BACK ROW (nearest tree) - Sandra Hamlett, Rodney Deaner, Tara Johnson, Cheryl Johnson. Front row - Brett Stratton, Gloiza Forrest, Mary-Anna Hale, and Scottie Booker.

Third graders at the Appomattox Elementary School observed last week's release of the American hostages from Iran.

Students participated in class discussions concerning the daily status of the hostages; developed questions they would like to ask the fifty-two Americans about their experiences; drew pictures showing the first thing they would do upon regaining their freedom if they had been hostages; observed a moment of silence; and developed short stories.

On Friday each third grader tacked a yellow ribbon to a designated tree on the school grounds.
